

Version 0.1 double sided PCB, PCBway, SMD 1206
Dimension+, Taipei, October 2017, @kimitobo

Frontside

- R1: 4k7 Ω (Voltage divider, analog in)
- R2: 22k Ω (Voltage divider, analog in)
- R3-4: 2 x 22k Ω (Voltage divider SD-Prog)
- R5: 1 x 22k Ω (Buttons 1 Left)
- R6: 1x 1K Ω (Power led resistor, if red)
- R7: 470 Ω (NEO-Pixel data stabilizer)
- R8: 470 Ω (Output Filter)
- R9: 470 Ω (Prog. LED resistor, if green)
- C1: 100nF (SD-Prog de-coupling)
- C2: 100nF (Output Filter)
- C3: 100nF (Voltage stabilization)
- 1 x ATTINY85
- 3 x NEO Pixel (SK6812)
- 2 x LED (Power and Prog-Status)
- 1 x Push-Button
- 1 x Reset push-button (mini)
- 2 x 3pin servo socket (male)
- 1 x 3pin analog sensor socket (female)
- 1 x Lipo-socket
- 1 x Audio connector, 3,5mm, slim barrel

Circuit is based on 8Bitmixtape with ATiny85 audio bootloader circuit. wiki.8Bitmixtape.cc
